SENIOR MANAGER PHARMACEUTICAL RESEARCH CENTER

On behalf of a well known Multinational Pharmaceutical Company we are searching for a Senior Manager for their **RESEARCH CENTER** based in Italy.

THE COMPANY

Is one of the largest **research-based**, global leaders in pharmaceuticals, consumer health care products, and animal health care products in the world. A global health care leader fully dedicated to solving the world's most critical health problems through **research and development**, spending over \$2 billion in overall R&D, with annual sales over \$15 billion and products sold in more than 140 countries. Leading the world in **innovation** by linking pharmaceutical, biotech, and vaccines technologies. Making quality, integrity, and excellence hallmarks of the way to do business. Attracting, developing, and motivating the best people. Continually growing and **improving** the business. The Company employs more than 44,000 people worldwide and worldwide resources include manufacturing facilities on five continents, and a **discovery and development platform encompassing pharmaceuticals, vaccines, and biotechnology**.

The Divisions

Pharmaceuticals: prescription products, vaccines, biopharmaceuticals, and nutritionals. Product portfolio includes innovative treatments across a wide range of therapeutic areas. The Company has a long history of pioneering developments in pharmaceuticals and biotechnology, with leading products in the areas of women's health care, neuroscience, musculoskeletal disorders, cardiovascular therapy, vaccines and infectious disease,

haemophilia, immunology, and oncology. It is also a leader in the development of nutritionals.

Consumer Healthcare: leader in the research, development, manufacturing, and marketing of a broad range of consumer health care products, operating in over 65 countries. Consumer Healthcare is the third-largest over-the-counter (OTC) health care products company in the world. The dedication to improving health worldwide has made the Consumer Healthcare Division a top competitor in more than a dozen important categories, including analgesics, cough/cold/allergy, and vitamin/nutritional supplements.

Animal Health: world leader in animal health, offers a wide range of biologicals and pharmaceuticals for the livestock, swine, and poultry industries, as well as for companion animals such as dogs, cats, and horses.

2. RESEARCH AND DEVELOPMENT

An outstanding, pre-eminent ability in **research and development** tops the list of the Company corporate strengths. The research and development strategy is to continue to invest in **innovative products**, which are essential to the long-term success of health care companies. The level of spending places the Company **among the world's leading pharmaceutical companies in terms of research and development commitment.**

The Research organizes the efforts of its employees worldwide in the search for and development of new drugs that will enhance both the quality of health care and the Company product line. The commitment to research and development demonstrates the focus on the future. The goal is to consistently produce **new, innovative** treatments that provide the world with a healthier tomorrow. Company researchers devote much of their time and energy to discovering and developing products in specialized

therapeutic areas, including women's health, cardiovascular, musculoskeletal, transplantation and immunology, gastrointestinal, clotting disorders, infectious disease, neuroscience, and oncology, as well as the development of vaccines and nutritionals

Research areas include: Pharmaceutical Research and Development, Biopharmaceuticals, Vaccine Research and Development, Women's Health Research Institute, Consumer Health Global Scientific Affairs, Animal Health Research and Development.
